SUMMARY

Date:	23-05-2020		Name:	Apoorva H P
Sem & Sec	VI A		USN:	4AL17CS011
Online Test Summary				
Subject	PYTHON IA Test			
Max. Marks	30	Score	19	
Certification Course Summary				
Course	Python for Machine learning			
Certificate Provider	Great Learning	Duration	5hr	
Coding Challenges				
Problem Statement: 1. Python program to print positive numbers in a list. Given a list of numbers, write a Python program to print all positive numbers in given list. 2. Python program to count positive and negative numbers in a list. Given a list of numbers, write a Python program to count positive and negative numbers in a List.				
Status: Completed				
Uploaded the report in GitHub		Yes		
If yes Repository name		https://github.com/ashaapoorva/online-coding-and-certification-course		
Uploaded the report in slack		Yes

Coding Challenge Details

1. Python program to print positive numbers in a list. Given a list of numbers, write a Python program to print all positive numbers in given list.

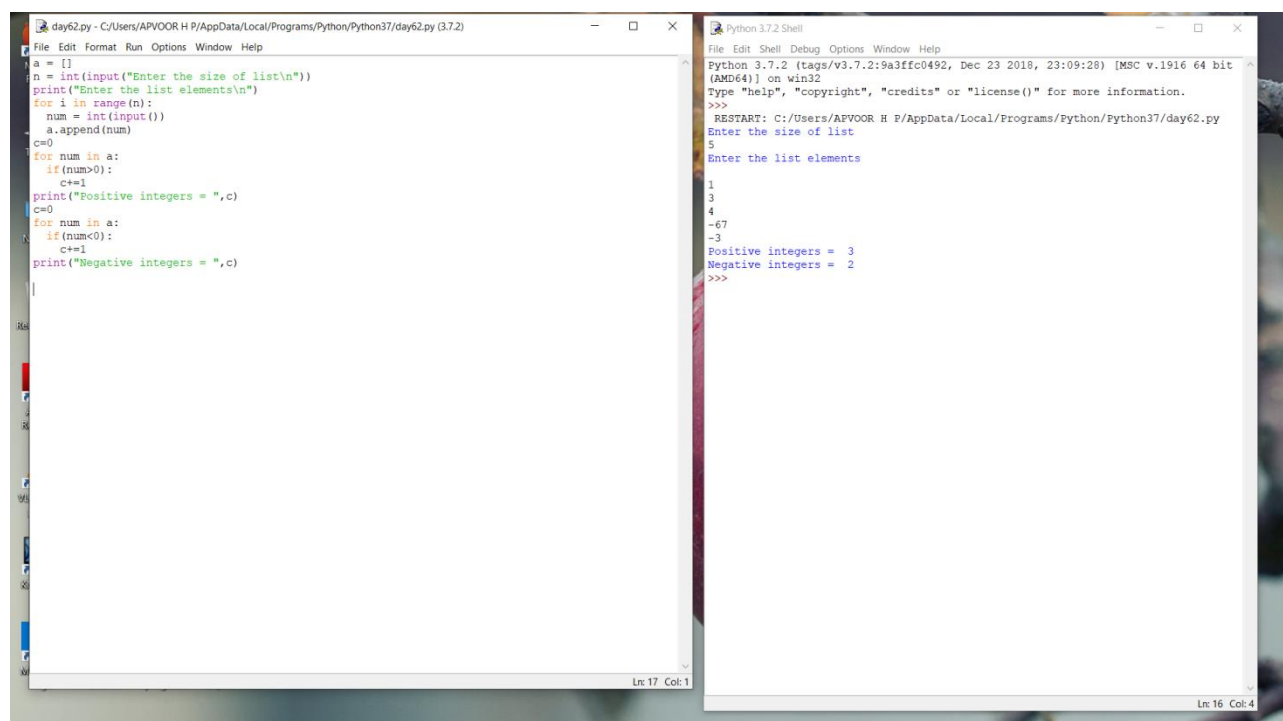

The screenshot shows a Python IDE with two windows. The left window, titled 'day61.py', contains the following code:

```
a = []
n = int(input("Enter the size of list\n"))
print("Enter the list elements\n")
# print("The positive numbers are")
for i in range(n):
    num = int(input())
    a.append(num)
print("The positive numbers are\n")
for num in a:
    if (num > 0):
        print(num)
```

The right window, titled 'Python 3.7.2 Shell', shows the execution of the program. It prompts the user to enter the size of the list (5) and then the list elements (1, -56, -5, 3, 6). The output is 'The positive numbers are' followed by the positive numbers in the list (1, 3, 6).

2. Python program to count positive and negative numbers in a list. Given a list of numbers, write a Python program to count positive and negative numbers in a List.

The screenshot shows a Python IDE with two windows. The left window, titled 'day62.py', contains the following code:

```
a = []
n = int(input("Enter the size of list\n"))
print("Enter the list elements\n")
for i in range(n):
    num = int(input())
    a.append(num)
c=0
for num in a:
    if (num > 0):
        c+=1
print("Positive integers = ",c)
c=0
for num in a:
    if (num < 0):
        c+=1
print("Negative integers = ",c)
```

The right window, titled 'Python 3.7.2 Shell', shows the execution of the program. It prompts the user to enter the size of the list (5) and then the list elements (1, 3, 4, -67, -3). The output is 'Positive integers = 3' and 'Negative integers = 2'.
